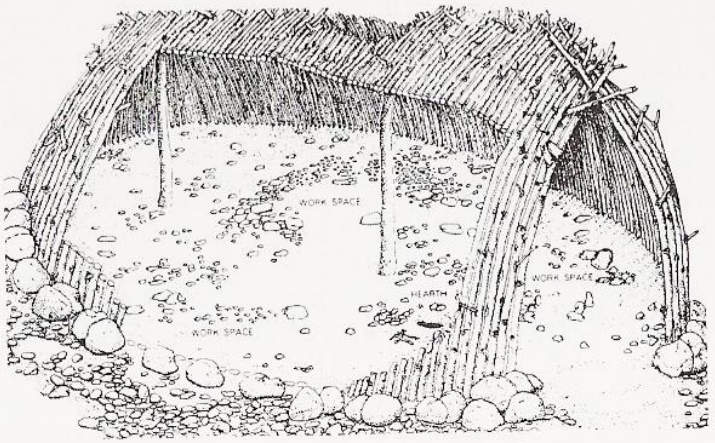
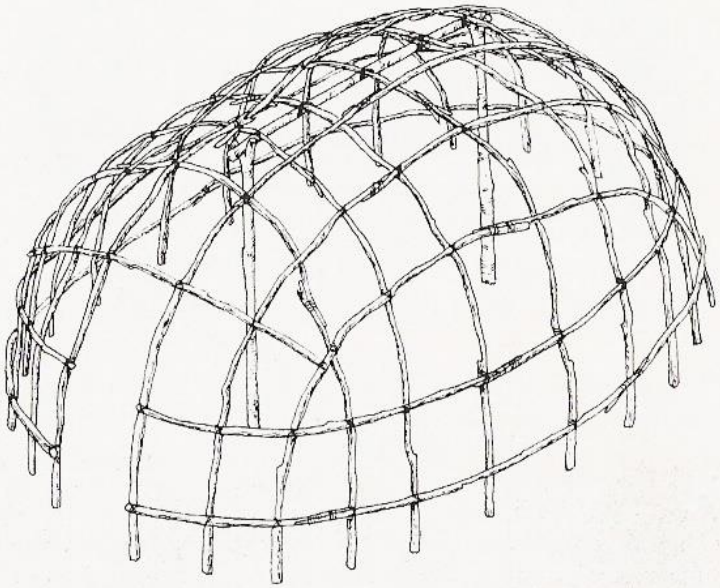
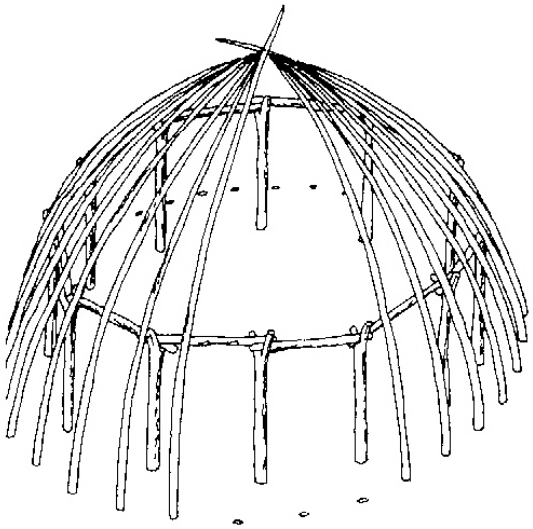
STRUKTUR & BAHAN

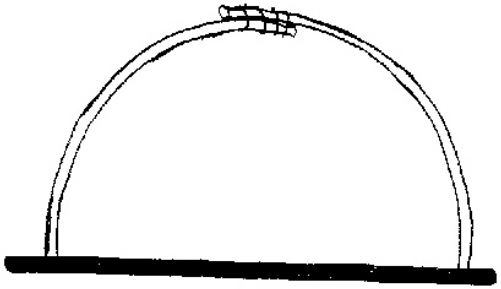
LIGHT STRUCTURE

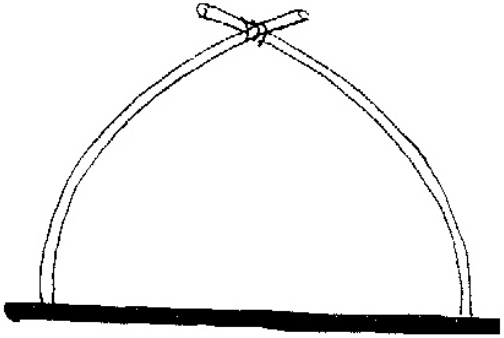


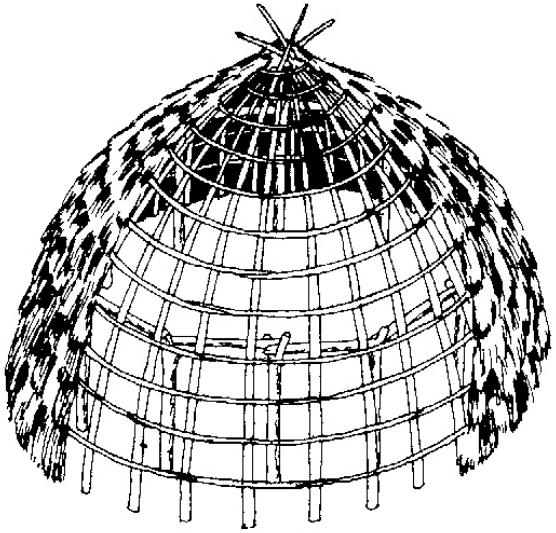
This sketch illustrates the most probable construction of one of the earliest house structures, found at "Terra Amata" near Nice, France. Each of the 20 units accommodated up to 15 people. The largest measured 15 m by 6 m. [2.02]

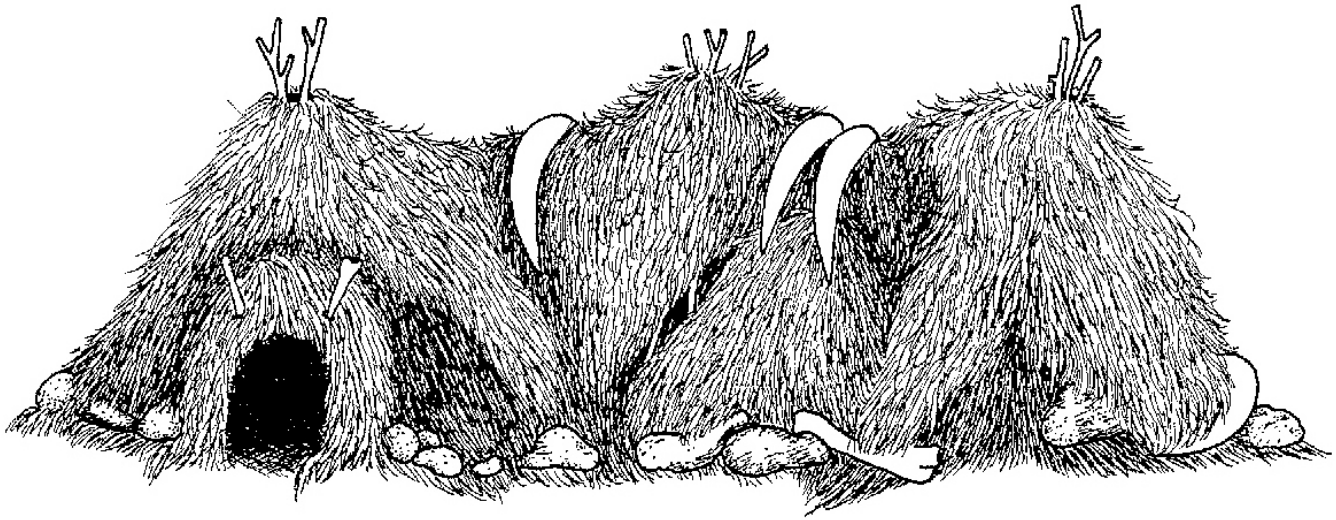


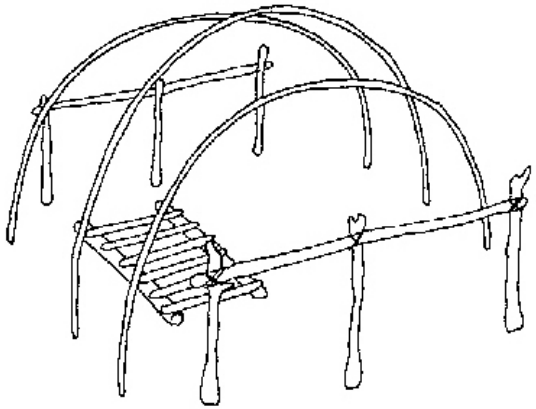


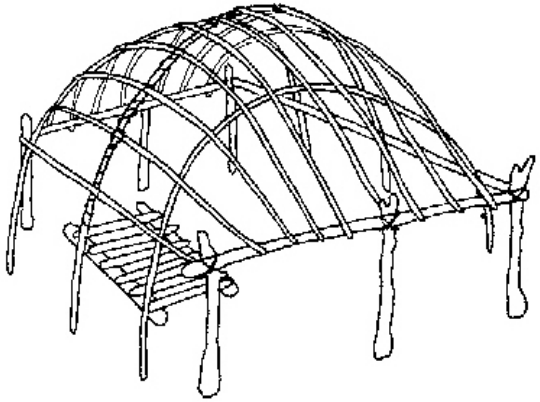


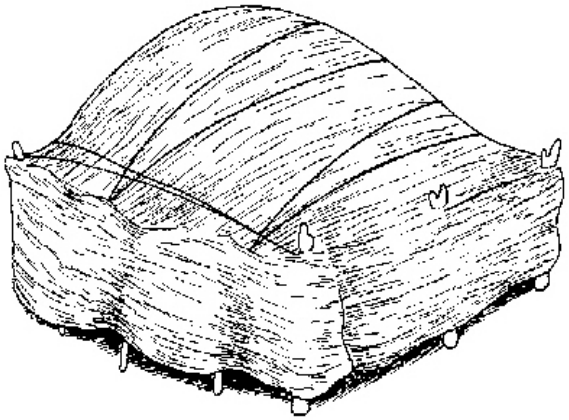


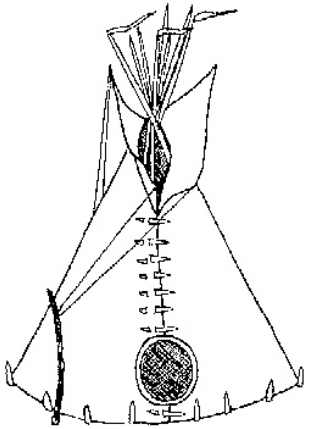


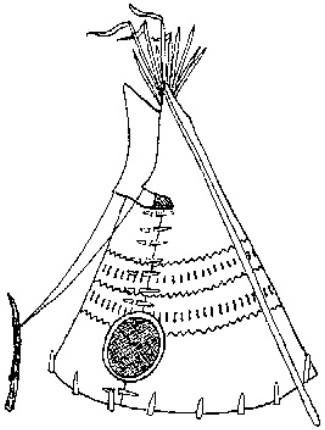


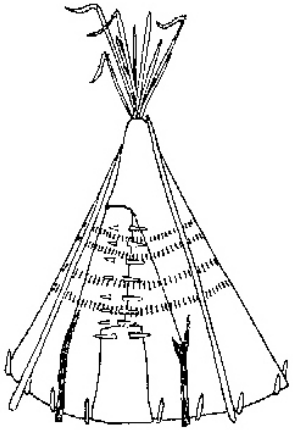


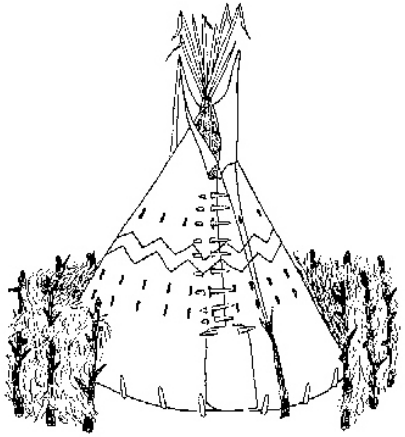












The orthogonal stick-framed dome structure of this North American wigwam resembles the structures found in Terra Amata and many ancient communities of Africa and Asia. [2.03]
