# MAPPING THE CITY

- *“A map is a visual representation, but it describes something which cannot be seen; it is an abstraction of reality”*

— L. Farrelly, *Drawing for Urban Design*

# MAPPING THE CITY

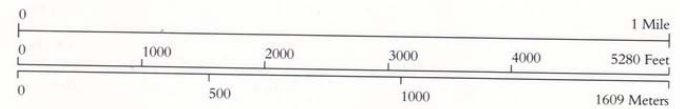

- *Aim:*
- *To engage with urban space and get information about it*
- *To visualize information about urban space*

# COGNITIVE MAP

This map is focused on the island of Manhattan and is color coded. Some of the bridges are included but not all and no tunnels. Only the edge of Brooklyn is shown and the rivers look like the ocean. Boats figure prominently. Several key streets are shown but mostly crosstown.

Drawn by Susan, 35 year old painter who lived on the Upper West Side.
