Hex chair

Akhirnya, setelah 2 tahun bekerja keras dan memoles mesin, Kursi Hex pertama menemukan jalannya ke Galeri Hedge di San Francisco.

Dari koleksi terbatas meja, rak, dan bahkan wastafel kamar mandi dirancang sebagai bagian dari edisi terbatas. Blok material dibuat di sumber untuk proyek dengan aluminium kelas tertinggi, kemudian CNC selama beberapa bulan. Setiap item harus dipoles dengan tangan untuk mencapai pembagian garis halus dan kemudian diberi lapisan satu partikel untuk melindungi permukaan sekaligus mempertahankan permukaan gloss.

The LessThanFive Chair, composed entirely of carbon fibre. Carbon fibre is one of the strongest and lightest materials available in today's world of engineering and design - thus implemented in the production of sports equipment, motor cars, aviation, nautical and now furniture.

Less than five chair, 2014

DESAINER DAN MATERIAL

Michael Young adds: "After working with Giant in Taiwan and making friends with members of the local design community, I was introduced to a sophisticated carbon fibre factory specializing in the manufacture of sports bikes. I decided to try and harness this production capacity and create a chair that was suitable for the consumer market. This chair was not designed with any other material than carbon in mind and it could not be made in wood or plastic.

Hacker watch, 2011

Michael Young's new timepiece for o.d.m. is inspired by many of the precision engineering projects his studio has been involved with in Hong Kong. The appearance is based on the application of visual ergonomics, using bold lines that lead the eyes pleasantly and allowing the time to be read at a glance.

Meanwhile, the metal disc in the centre offers strong protection for daily use, so it's durable yet classical in style. Hacker Watch is designed for running about in a city and for all occasions.

"This watch is a real conversation starter!"

Shop Tweet Like

Welcome to the second in a series of regular posts where we ask people about their favourite watches. Meet us, Marcus Pains, editor-in-chief at [Desainer](#).

Name and position: Marcus Pains, editor-in-chief at [Desainer](#).

What watch are you wearing? It's a [Hacker watch](#) by [Michael Young](#), in gold.

Why did you choose this watch? I really like how bold and dramatic it is, but also the relative simplicity of its design and its modest size. For a gold watch, it's quite discreet and not at all bling.

When did you get it? I started wearing it as soon as it came out in 2011, and I've been wearing it ever since. It's been on my wrist every day for over two years and I've never had any problems with it. It's very reliable and hard-wearing. The strap is particularly good: the silicon rubber doesn't wear as quickly as leather does. It still looks pretty new.

Can you tell us an interesting story about your watch? It's a real conversation starter! I recently returned from Design Miami (the last stop of the [Desainer and HTML world tour](#)) and it was a really big hit with designers and exhibitors there. People ask about it all the time. For some reason young men who work in cafes and bars are particularly attracted to it. They often ask me where I got it, so I give them details of [Desainer Watch Store](#). It's safe to say we've sold loads of them that way!

Money clock

"As part of a family of products, I discovered this technique of folding paper almost immediately upon arriving in Hong Kong. I saw a simple toy made out of this beautiful craft which was never really exploited in the arts' arena. My objective was to take it out of Asia and present it as a local craft, which indeed it is. Each product has thousands of folded papers which are inter-locked to form a whole. The clock idea came about because of the amount of time it actually takes make them, I eventually made an edition clock for Kreo Paris in 1 USD notes, a total of 1,440 to represent the hours in the day and night. I went on to create a series of products in this way, even panels for the Pissarro restaurant in Hong Kong, which used over 300,000 specially dyed components."

— Michael Young
